

ABSTRACT OF THE DISCLOSURE

The invention relates to a sleeping bag consisting of adjacent chambers that are formed by partition walls. The chambers contain a filling material. The sleeping bag also consist of a zip and inner and outer linings which cover the chambers. The outer lining consist of a waterproof material. The outer lining and the partition walls or the outer lining and fixing stripes being connected to the partition walls consist of a material that can be sealed. The partition walls are sealed onto the outer lining from the inside at the end of said walls or by means of the fixing strips.
